

Group by Assignment

#1 Find total sales amount per customer name

```
select c.customer_name, sum(s.total_amount) as total_sales from sales s join customers c on  
s.customer_id = c.customer_id  
group by c.customer_name;
```

#2 Find total number of products in each category name

```
select c.category_name, count(*) as total_products from products p join categories c on p.category_id =  
c.category_id  
group by c.category_name;
```

#3 Find average product price by category name

```
select c.category_name, avg(p.price) as avg_price from products p join categories c on p.category_id =  
c.category_id  
group by c.category_name;
```

#4 Find total stock by supplier name

```
select s.supplier_name, sum(p.stock_quantity) as total_stock from products p join suppliers s on  
p.supplier_id = s.supplier_id  
group by s.supplier_name;
```

#5 Find total number of customers in each country

```
select country, count(*) as total_customers from customers group by country;
```

#6 Find maximum product price in each category name

```
select c.category_name, max(p.price) as max_price from products p join categories c on p.category_id =  
c.category_id  
group by c.category_name;
```

#7 Find minimum product price in each category name

```
select c.category_name, min(p.price) as min_price from products p join categories c on p.category_id =  
c.category_id  
group by c.category_name;
```

#8 Find total quantity sold per product name

```
select p.product_name, sum(si.quantity) as total_quantity from sale_items si join products p on  
si.product_id = p.product_id  
group by p.product_name;
```

#9 Find total sales handled by each employee name

```
select e.employee_name, sum(s.total_amount) as total_sales from sales s join employees e on  
s.employee_id = e.employee_id  
group by e.employee_name;
```

#10 Find number of orders per customer name

```
select c.customer_name, count(s.sale_id) as total_orders from sales s join customers c on s.customer_id = c.customer_id
group by c.customer_name;
```

#11 Find total inventory per supplier name

```
select s.supplier_name, sum(i.quantity_in_stock) as total_inventory from inventory i join suppliers s on i.supplier_id = s.supplier_id
group by s.supplier_name;
```

#12 Find total refund amount per product name

```
select p.product_name, sum(r.refund_amount) as total_refund from returns r join products p on r.product_id = p.product_id
group by p.product_name;
```

#13 Find total refund amount per sale

```
select sale_id, sum(refund_amount) as total_refund from returns group by sale_id;
```

#14 Find number of customers per membership type

```
select m.membership_type, count(*) as total_customers from customers c join memberships m on c.membership_id = m.membership_id
group by m.membership_type;
```

#15 Find average salary by role

```
select role, avg(salary) as avg_salary from employees group by role;
```

#16 Find total salary by role

```
select role, sum(salary) as total_salary from employees group by role;
```

#17 Find number of employees per role

```
select role, count(*) as total_employees from employees group by role;
```

#18 Find total products supplied by each supplier name

```
select s.supplier_name, count(*) as total_products from products p join suppliers s on p.supplier_id = s.supplier_id
group by s.supplier_name;
```

#19 Find average stock quantity per product name

```
select p.product_name, avg(i.quantity_in_stock) as avg_stock from inventory i join products p on i.product_id = p.product_id
group by p.product_name;
```

#20 Find total number of sales per date

```
select sale_date, count(*) as total_sales from sales group by sale_date;
```

#21 Find total revenue per date

```
select sale_date, sum(total_amount) as total_revenue from sales group by sale_date;
```

#22 Find total sales per membership type

```
select m.membership_type, sum(s.total_amount) as total_sales from sales s
join customers c on s.customer_id = c.customer_id join memberships m on c.membership_id =
m.membership_id
group by m.membership_type;
```

#23 Find total orders per country

```
select c.country, count(s.sale_id) as total_orders from sales s join customers c on s.customer_id =
c.customer_id
group by c.country;
```

#24 Find total revenue per country

```
select c.country, sum(s.total_amount) as total_revenue from sales s join customers c on s.customer_id =
c.customer_id
group by c.country;
```

#25 Find total quantity sold per category name

```
select c.category_name, sum(si.quantity) as total_quantity from sale_items si
join products p on si.product_id = p.product_id join categories c on p.category_id = c.category_id
group by c.category_name;
```

#26 Find total products per category name

```
select c.category_name, count(*) as total_products from products p join categories c on p.category_id =
c.category_id
group by c.category_name;
```

#27 Find average price per supplier name

```
select s.supplier_name, avg(p.price) as avg_price from products p join suppliers s on p.supplier_id =
s.supplier_id
group by s.supplier_name;
```

#28 Find maximum salary per role

```
select role, max(salary) as max_salary from employees group by role;
```

#29 Find minimum salary per role

```
select role, min(salary) as min_salary from employees group by role;
```

#30 Find total number of returns per product name

```
select p.product_name, count(*) as total_returns from returns r join products p on r.product_id =
p.product_id
group by p.product_name;
```

#31 Find total returns per date

```
select return_date, count(*) as total_returns from returns group by return_date;
```

#32 Find total refund per date

```
select return_date, sum(refund_amount) as total_refund from returns group by return_date;
```

#33 Find number of products per supplier name

```
select s.supplier_name, count(*) as total_products from products p join suppliers s on p.supplier_id = s.supplier_id  
group by s.supplier_name;
```

#34 Find average quantity sold per product name

```
select p.product_name, avg(si.quantity) as avg_quantity from sale_items si join products p on  
si.product_id = p.product_id  
group by p.product_name;
```

#35 Find total revenue per employee name

```
select e.employee_name, sum(s.total_amount) as total_revenue from sales s join employees e on  
s.employee_id = e.employee_id  
group by e.employee_name;
```

#36 Find number of sales per employee name

```
select e.employee_name, count(*) as total_sales from sales s join employees e on s.employee_id =  
e.employee_id  
group by e.employee_name;
```

#37 Find total customers joined per date

```
select join_date, count(*) as total_customers from customers group by join_date;
```

#38 Find total inventory per product name

```
select p.product_name, sum(i.quantity_in_stock) as total_inventory from inventory i join products p on  
i.product_id = p.product_id  
group by p.product_name;
```

#39 Find average inventory per supplier name

```
select s.supplier_name, avg(i.quantity_in_stock) as avg_inventory from inventory i join suppliers s on  
i.supplier_id = s.supplier_id  
group by s.supplier_name;
```

#40 Find total quantity sold per sale

```
select sale_id, sum(quantity) as total_quantity from sale_items group by sale_id;
```

#41 Find max quantity sold in a sale

```
select sale_id, max(quantity) as max_quantity from sale_items group by sale_id;
```

#42 Find min quantity sold in a sale

```
select sale_id, min(quantity) as min_quantity from sale_items group by sale_id;
```

#43 Find total products returned per sale

```
select sale_id, count(*) as total_returns from returns group by sale_id;
```

#44 Find average refund per product name

```
select p.product_name, avg(r.refund_amount) as avg_refund from returns r join products p on  
r.product_id = p.product_id group by p.product_name
```

#45 Find total revenue per supplier name

```
select s.supplier_name, sum(si.quantity * si.price_at_sale) as total_revenue from sale_items si
join products p on si.product_id = p.product_id join suppliers s on p.supplier_id = s.supplier_id
group by s.supplier_name;
```

#46 Find total quantity sold per supplier name

```
select s.supplier_name, sum(si.quantity) as total_quantity from sale_items si join products
using(product_id)
join suppliers as s using(supplier_id) group by s.supplier_name;
```

#47 Find total products per restock date

```
select last_restock_date, count(*) as total_products from inventory group by last_restock_date;
```

#48 Find total stock per category name

```
select c.category_name, sum(i.quantity_in_stock) as total_stock from inventory i join products p on
i.product_id = p.product_id
join categories c on p.category_id = c.category_id group by c.category_name;
```

#49 Find average product price per category name

```
select c.category_name, avg(p.price) as avg_price from products p join categories c on p.category_id =
c.category_id
group by c.category_name;
```

#50 Find total revenue per category name

```
select c.category_name, sum(si.quantity * si.price_at_sale) as total_revenue from sale_items si
join products p on si.product_id = p.product_id join categories c on p.category_id = c.category_id
group by c.category_name;
```
